Experience

IBM (Hybrid) Markham, ON

Team Lead Software Engineer, Planning Analytics Spreadsheet Services May 2023 - Present

- Authored user rows and columns for universal report, enabling user driven content in a dynamic data view, feature currently implemented at at least 10+ logos.
- Developed a robust symbolic token based query language parser to replace a regex based one, eliminating over 15 parsing related bugs.
- Implemented a net new feature with product management in 2 weeks to secure a seven-figure account.
- Engineered chunked loading systems, leading to 50% initial load time reductions for large use cases, with positive results reported at 3+ seven figure logos.
- Promoted to team lead after 1 year for a team of 11 developers and QA, oversaw migration to Jira and implemented story point system, improving team productivity by 40% through enhanced prioritization tactics.
- Lead customer empowerment efforts for the team, reduced the customer feedback backlog by 87% in one week.

Riot Games (Remote) Los Angeles, CA

Software Engineer Intern, Marketing Platform Technologies May 2022 - Aug 2022

- Engineered React Components for asynchronous related articles, deployed in Riot Games websites (Valorant, WildRift), the components drove 33% decrease in built time, enhancing overall publishing efficiency.
- Worked on production Riot product websites, solving 10+ I18N issues & regressions from Gatsby upgrade.
- Discovered & coordinated the repair of a defective API on the Valorant website with over 140k monthly page views, improving overall user experience.

University of Ottawa Ottawa, ON

Full-stack Software Developer (Front-end SME), Engineering Outreach Sep 2020 - May 2022

- Lead full-stack development efforts on an education programming SaaS, delivered 10+ business critical projects end-to-end alone or as a part of project teams, improving overall business efficiency.
- Redesigned mission critical customer enrollment & ordering feature processing over $1.5M in revenue annually.
- Re-architected cloud deployment design reducing cost by 50% while improving product load time by 40%.

Education

University of Ottawa Ottawa, Canada

B.AS. Software Engineering (Magna Cum Laude, GPA: 3.4) Sep 2019 – Jan 2023

Select Coursework:

Data Structure & Algorithms	Software Quality Assurance	Analysis and Design of User Interfaces	Databases
Software Construction	Cloud System and Networks	Operating systems	Real-time Systems

Skills

Languages: Java, Typescript, Javascript, Python, Golang, CSS, SQL/MDX
Web Front-end: React,js, Angular, Tailwind, RXJS, Redux, React Native, NextJS, Gatsby, Webpack, Vite
Web Back-end: Sling (AEM), IBM Websphere, Node, GraphQL, REST, Elastic Search, NestJS, Docker, Redis, PrismaJS
Databases: Postgres, MongoDB, Firebase, DynamoDB, TM1 (OLAP Database)

Selected Projects

Chronicle [Typescript, React, Node, MUI]: Practice tracking for personal care clinics **[Github]**

- Lead a team of 5 building a practice tracking SaaS for safely collecting information and tracking account balances, delivered all planned requirements on time.
- Designed, implemented and tested a ledger system to securely track transactions and customer balances, cutting checkout time in half.
